

Annual Inspections

Altec Preventive Maintenance Inspections

Preventive maintenance inspections can be scheduled at any Altec service center located in the U.S. and Canada. If you are unable to visit a service center, an Altec mobile service technician can come directly to you to perform an inspection.

Interactive Multi-Point Inspection

- Altec changes filters and lubricates components as outlined in maintenance manual.
- Altec checks any critical fastener torque as defined in the maintenance manual with a torque wrench.
- Altec stocks commonly used components in our service centers and on our mobile service vehicles to help improve uptime and minimize delays associated with issues found during an inspection.
- Per ANSI requirement, Altec not only operates the vehicle but also checks all unit functions including speeds, hydraulic pressures and flow, overload protection and performance related operations. Adjustments are made as necessary to meet factory-specific parameters.
- Altec uses manufacturer specific and model specific checklists to perform inspections in lieu of generic checklists that could cover a wide range of products.
- Visual inspection for cracks and general wear-and-tear.
