

Portable Guard Structure

The Batwing Portable Guard Structure offers utility crews a new, faster way to secure power lines above ground during installation or maintenance in just minutes, compared to the longer installation times for traditional guard structures.

Intended as a single-conductor guard, the Batwing is designed to attach to Altec digger-derricks or cranes with ease and provide an overhead safety mechanism for ensuring conductors stay off of roadways. The Portable Guard Structure Kit includes the turret, sheepshead, mast, two wing extensions and a carrying fitted case. Additional hardware includes 3/4-inch pins (3), 1/2-inch pins (2), and 2-inch pins with retainers (2).

Portable Guard Structure Kit

- Material: T-6061 aluminum
- Weight capacity: 1,000 lb
- Compatible with D3060 Altec derrick
